

GRACE KABERERE

Full Stack Software Engineer: React / TypeScript / Python

+254 798 145 126 | waitkabz@gmail.com

SUMMARY

Full stack software engineer with 4+ years of production experience building React/TypeScript client applications and Python backend services for a European SaaS platform. Strong track record architecting REST APIs, optimizing frontend rendering performance for large datasets, and running containerized (Docker) workloads on AWS. Experienced integrating third-party payment and CRM systems, and working across the full delivery lifecycle from design through production deployment.

CORE TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, Tailwind CSS, Shadcn, Leaflet, Bootstrap. Performance optimization for large/complex datasets (vector tiling, geometry simplification, rendering optimization)

Backend / APIs: Python, Django, FastAPI, Node.js, REST API design, asynchronous/queue-driven processing (AWS SQS), Kotlin, Java

Data: PostgreSQL, MySQL, MongoDB, MS SQL. Schema design, query optimization

Cloud & DevOps: AWS (EC2, SQS), Docker, GitHub Actions CI/CD, Git, infrastructure cost optimization

Integrations: Payment/subscription systems (Klarna/Kustom), CRM (HubSpot, Adversus), CMS (Puck), identity/auth (BankID)

WORK EXPERIENCE

Senior Software Engineer, Treebula Platform | Native Coders (Remote, Sweden) *Apr 2022 – Present*

- Built and optimized Treebula's interactive map dashboard (React, TypeScript, Tailwind, Leaflet), solving a browser-freeze issue on datasets of thousands of geospatial records through vector tiling, geometry simplification, and map filtering, delivering a smooth, responsive client experience.
- Migrated core backend services from Django to FastAPI, improving API documentation and developer velocity.
- Architected fault-tolerant, recoverable data processing pipelines using AWS SQS task orchestration, breaking long-running jobs into independently checkpointed stages that recover automatically from failures without full reprocessing.
- Led a cloud cost-optimization initiative, consolidating three AWS EC2 instances into one by analyzing workload patterns and refactoring processing schedules to run at non-overlapping times, cutting infrastructure spend while preserving performance for compute-intensive geospatial workloads.
- Built and maintained subscription billing integration with Klarna/Kustom, enabling automated renewals and supporting recurring revenue retention.
- Implemented BankID login with brute-force protection on magic-link authentication, strengthening account security and user trust.
- Built reusable, production-grade frontend components (TypeScript, Tailwind, Shadcn), reducing development time for new pages.
- Integrated CRM (HubSpot, Adversus) and CMS (Puck) systems, enabling marketing and sales teams to manage content and customer data without developer involvement.
- Conducted 20+ technical interviews and led code review practices that improved code quality and maintainability across frontend and backend teams.

Technologies: Django, FastAPI, Python, React, TypeScript, Tailwind, Shadcn, Docker, Leaflet, AWS, REST API, PostgreSQL, Git

Consulting Software Engineer (Part-Time), Shaba | Nairobi, Kenya *Sep 2021 – Sep 2024*

- Led end-to-end development of a two-sided marketplace platform (web and mobile), owning technical decisions from architecture through production deployment.

- Designed and implemented core functionality across frontend, backend, and database layers for artisan profile management, product marketing, and order processing.
- Managed the full release lifecycle including environment configuration, versioning, and Google Play Store publication.
- Partnered directly with founders to translate business goals into scalable technical solutions.

Technologies: Kotlin, React, JavaScript, Node.js, MySQL, Firebase, Agile

Mobile App Developer, Masterclass Solutions | Nairobi, Kenya

Jun 2019 – Mar 2021

- Built reusable API integration libraries (Retrofit/OkHttp) adopted across multiple client projects, reducing duplicate networking code and speeding up feature delivery.
- Engineered offline-first data handling, including intelligent retry logic, request caching, background sync, and local persistence (Room), to keep applications usable on unreliable 3G networks, directly analogous to building resilient client architectures for volatile network conditions.
- Collaborated with backend engineers to define and review REST API contracts for scalability and backward compatibility.
- Introduced unit testing discipline (JUnit, Mockito, Espresso) on critical networking and caching paths.

Technologies: Java, Android SDK, Room, Retrofit, OkHttp, REST APIs, MVVM

EDUCATION

Bachelor of Science, Computer Science, Egerton University, Kenya (2019)

ADDITIONAL

- Technical Mentor, Safaricom Technovation Challenge. Led development of a mobile app for household safety reporting.
- Android Facilitator, Andela Learning Community (2018–2019)
- Certificate of Outstanding Leadership, Women in Tech (2018–2019)
